[2N TELEKOMUNIKACE](#) has prepared an e-news introducing you to interesting new products in the form of 2N® Netspeaker and 2N® SmartCOM.

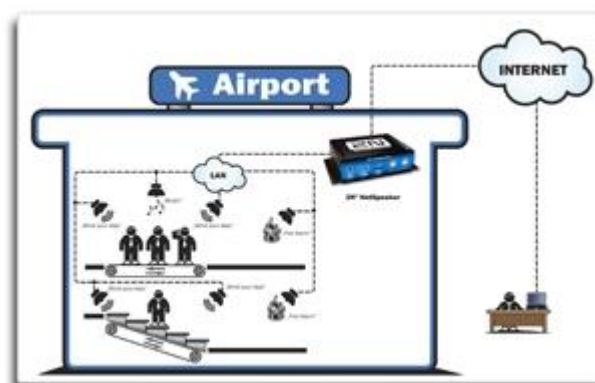

How useful are those products for you? Are our new products what you are waiting for in the field of elevator communicators? We appreciate your comments and suggestions.

2N® Netspeaker - Flexible audio broadcasting over IP

Where it's used – escalators at airports, shopping centres...

Purpose - to announce the start and end of escalators („Mind your step”). The playback of adverts, music or other announcements.

Advantages - connection to LAN without the need for a power supply (LAN is always available in these types of building, and PoE (Power over Ethernet) enables a solution without a special power supply).

- The ability to playback the same message everywhere at the same time using the Internet or LAN (e.g. alarm, adverts, other announcements).
- The ability to playback different announcements or music on each device, or in defined zones.

2N® SmartCOM – Download data directly from the comfort of your office

Where it's used –lifts and escalators

Purpose– remote access to a COM port via a GSM network

Advantages – convenient configuration and downloading of data directly from your office without having to go in person to the device with COM port.

Do you like new products 2N® Netspeaker a 2N® SmartCOM? Do you have insights on the market? [Contact Lift Department Director Josef Bešta.](#)

2N® LiftNet – new firmware 1.5.5

- Increased protection against electromagnetic interference in the case of installation, for example, in factories or at airports.
- New parameter 990 – System configuration. This parameter enables the setting of full power for the bus in the case of extensive cabling.
- Automatic restart of connected announcers – service that checks the connected announcers and their communication with the central unit (WatchDog).
