

SUCCESS STORY

Greenhill Park in Brussels: securing a limited-edition project with unlimited luxury

CHALLENGE

Greenhill Park is a very exclusive new-built project alongside the Woluwe Park in Brussels. This pinnacle of taste consists of a total of 31 luxury apartments. Because Greenhill Park is the benchmark in luxury real estate, everything has been thought through in detail. Each apartment enjoys a marvellous view of the delightful garden while, inside, every apartment benefits from high-end interior design and the latest 'smart home' features. When our integrator, EASING BVBA, was asked to install access security technologies in this luxurious residential project, the brief was clear:

Focus on elegance and exclusivity

Provide a reliable access system with luxurious design

Innovative functionality and system control

Ease of administration, configuration and installation

MODULARITY

The 2N access system provides additional options for further access technologies that can be added in the future, e.g. Bluetooth module, Fingerprint Reader module or the 2N® Mobile Video application (the ability to open the door from anywhere around the world).

SIMPLE ADMINISTRATION

Intercoms and access control units can be set up remotely via the 2N® Access Commander so that the security agency can monitor the residential complex in real time.

For this luxurious project, we placed a big emphasis on the selection of components of the very highest quality, and on design. 2N's products successfully met our challenging requirements through the comprehensiveness of the solution, and the award-winning product design.

from Easing BVBA

SOLUTION

Our partner decided to use products from the 2N portfolio to address this challenge:

2N® IP VERSO

2N® IP Verso intercoms were selected for this project and 19 of them were installed at each of the entrances to provide secure access. Thanks to its modularity, the IP Verso security intercom was configured based on the specific needs of each villa.

The intercoms have a modern touch screen display and an NFC/RFID reader, allowing the residents to use RFID cards.

2N® INDOOR COMPACT

2N® Indoor Compact answering units were installed in all of the 31 luxury apartments. The answering unit has an impressive 4.3" colour display with a 3mm tempered glass surface. Besides receiving video calls, opening doors, displaying missed calls and switching to silent mode.

2N® ACCESS UNIT RFID

In addition, the residential complex has 14 2N® Access Units which guard the entrances to an underground car park and communal premises.
